Message from the Guest Editor

Dear Colleagues,

Irrigation management and application of fertilizers and plant protection products in olive (*Olea europaea*) growth, is still not completely clarified, however, it is essential for sustainable production. Climate change may affect the area of land suitable for olive cultivation and change production levels, thus causing serious damage to the olive grove agro-ecosystem. Biotic and abiotic factors characterize and predict the current and potential distribution of cultivated locations.

The appearance, color and main biochemical components of olive fruits and olive oil are influenced by the fruit ripening stage. Olive fruit ripening involves a combination of physiological and biochemical changes influenced by several environmental and cultural conditions. Agronomic and technological factors, including variety, irrigation rate, pest attack, fruit diseases, and harvest time affect fruit and oil quality. In parallel, the valorization of other by-products is worth addressing.

This Special Issue welcomes contributions that aid in the evaluation of relationships between cultivation practices, variety origin, fruit ripening procedures and chemical composition.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: Indexed in the Science Citation Index Expanded (SCIE) - Web of Science from Vol. 5 (2015). Covered in Scopus (2018 CiteScore: 2.59) and other databases.

Rapid Publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 20.3 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the second half of 2019).
